FOREWORD

Characteristics of Physicians represents an initiative by the American Medical Association's Center for Health Services Research and Development (AMA-CHSRD) to provide comprehensive, detailed and accurate data on the entire physician population in the United States. *Characteristics of Physicians* is related to two other AMA-CHSRD publications: *Physician Distribution and Medical Licensure in the United States,* and *Medical School Alumni.* This publication differs from these in that more characteristics are detailed for smaller geopolitical units of analysis. Comprehensiveness and detail do, however, have their cost. A total of fifty-one volumes, one for each of the States and the District of Columbia, are required in order to present these data.

Successful completion of this project has required cooperation between the AMA and the Bureau of Health Manpower of the Department of Health, Education, and Welfare (DHEW). The *AMA Physician Masterfile* is the data source and considerable resources have been utilized by the AMA in developing the computer programs and designing the volumes. Contract #HRA-232-78-0163 with the Health Resources Administration of DHEW has provided the financial support needed to print and disseminate these volumes. In addition to the bound volumes, print tapes of the information contained in this report are available from the Bureau of Health Manpower. Howard V. Stambler, Director of the Division of Manpower Analysis of the Bureau of Health Manpower is the Contract Project Officer. Views or conclusions contained in this study should not be interpreted as representing the official opinion or policy of the Department of Health, Education, and Welfare.

Characteristics of Physicians was conceived by AMA-CHSRD partially in response to passage of the National Health Planning and Resources Development Act of 1974 (PL #93-641). With passage of this legislation it became apparent that planning and regulation were to become integral components of the health care system in the United States.

The distribution of physicians also has been the object of Federal legislative action for several decades. Since 1965, four separate pieces of legislation each attempting to effect a different distribution of health manpower resources have been enacted by the federal government. The most recent of these is the Health Professions Educational Assistance Act of 1 484). Specifically, this Act ties Federal cap to the specialty distribution of first-yea Further, the loan forgiveness program f locating in designated shortage area strengthened. Directly related to healt legislation is the designation of shortage a criteria for designating shortage areas app those areas designated as such really expe tages? These issues and related ones h resolved.

The *Characteristics of Physicians* series meet some of the data requirements inh market approaches to resource distributio tion. Assessment of specialty and l distributions, determination of physician sh and planning to ensure that health care nee quire detailed data on relevant characte physician population. Data in the COP Se available with the expressed hope that coupled with intelligent analysis and caref mulation.

Use of these data, however, will not be policy makers. In addition, individual ph utilize *Characteristics of Physicians* for ma and migration decisions, and medical sc consult *Characteristics of Physicians* to types of continuing medical education pr to be of interest to a large proportion of the region. Researchers in health care and sciences have also repeatedly expressed a type of data provided. Therefore, *Char Physicians* is being widely distributed in a meet the repeatedly expressed needs groups.

The efficacy of the market as an a distributive mechanism for health care re is gaining supporters. It will be some ti before the desired incentives can be reint the health care market. Until that time CHSRD is attempting to ensure that relating to health personnel are based on available and, thus, introduce as few c possible.

Services Research and I

ACKNOWLEDGEMENTS

Many persons within the American Medical Associa- have contributed to the success of this endeavor its several years. The authors wish to thank Chris Theodore, Group Vice-President, Operations and elopment Group, for his overall support of this pro- 's goal from its conceptualization in 1976 to its com- ion. Special appreciation goes to Lynn E. Jensen, ector of the Center for Health Services Research and elopment, and Project Director, for his efforts in ting the project possible and in assuring the lablity of resources necessary to its successful com- ion. Gene Roback of the AMA Survey Data Center e helpful advice and comments during concep- ization and throughout the term of this project. y Schneier and Raymond Healy, from the AMA sion of Computer and Information Services, pro- d the programming expertise needed to complete this project. Jim Durczak designed and executed th work for the volumes.

Within the Center, numerous individuals pl significant roles during the course of the project: W Wendling and Glen Misek handled a number of relating to verification, progress reports, and dinating later phases of the preparation for publica Arsenio Oloroso provided editorial advice throug numerable phases of publishing 50 seemingly distinguishable state editions; Dorothy Pazur Barnette Collins assumed day-to-day administr tasks.

Finally, the authors also wish to thank Howar Stambler, Director, Division of Manpower Anal Bureau of Health Manpower, Department of He Education, and Welfare, and Project Officer, for h forts to make publication and distribution of volumes possible. Special appreciation goes to Kramer, Contract Liaison, for her work in coordin publication and dissemination activities for the Bu

INTRODUCTION

Characteristics of Physicians (COP) provides detailed information on several key characteristics of physicians by their geographic distribution in the United States as of December 31, 1975. This is the first American Medical Association publication to present data for the 205 health service areas (HSA's) designated under the National Health Planning and Resources Development Act of 1974 (PL #93-641). There is a separate volume of COP for each of the fifty states and the District of Columbia. Each presents state-specific detailed data for health service areas, demographic county groups, and counties, as well as summary national data for comparative purposes. Thus, the series provides the only compatible data base on physicians across all areas and should be of significant use to practitioners and researchers in the health care industry.

The data presented here are for the physician population practicing in the United States. Detailed characteristics are presented for all physicians with known addresses in a geographic region who are professionally active. In addition, counts of physicians who are inactive or are not classified are provided on each table.

December 31, 1975 was selected as the point in time of this report for the following reasons;

- PL #93-641 was signed in January, 1975, and it was only during 1976 that significant activity was undertaken in response to this legislation. Thus, 1975 represents the last year in which the health care system was not affected by this major piece of legislation and, therefore, is the most appropriate base year for future analyses of the impact of this legislation.
- Because this represents the first statistical series of its scope, an exceptional amount of time had to be expended in the conceptualization of the project, preparation of data set, and writing of the necessary computer programs. However, plans are being developed for publication of these volumes on a more regular and current basis in the future.

The introductory material which follows provides definitions and discussions of the geographic aggregations and the specific physician characteristics tabulated. This publication's relationship to other AMA publications and to other data sources is detailed. In addition, the *American Medical Association Physician Masterfile* is described; a list of the health service areas covered in this volume is given; and a sample of the questionnaire which is sent to physicians for the purpose of updating the *AMA Physician Masterfile* is included. Twenty-one tables listed in the Table of Contents—six national tables, which are repeated in all 51 volumes, and 15 state-specific tables providing: state, HSA, county groups and county data—follow immediately. An additional table which provides medical school data is included for states having medical schools.

te: Cities defined as independent are included in "number of counties" column.

rce: Louis J. Goodman, *Physician Distribution and Medical Licensure in the U.S.*, 1976 (Chicago: American Medical Association, 1977), p. 32.

pendent cities, largely those in Virginia, are incor- ated into the county which encompasses it. For in- ce, Princess Anne County in Virginia is referred to irginia Beach city. In addition, Kalawao County in vaii is combined with Maui County and Alaska is ded into four judicial divisions with assignment into ropriate county group based on the population of judicial division.

alth Service Area

he National Health Planning and Resources elopment Act of 1974 mandated the division of the . into health service areas. One section of this lication, Tables 16-18, presents data on Non-Federal sicians in health service areas located entirely or par- y within the state covered in this volume. States with e than one health service area within their boun- es have tables for each health service area. In states re the entire state is designated a health service area, e is, of course, only one health service area table. ne existing *Masterfile* data were converted into the th service area classifications based upon the listing ealth service areas published in the September 2, , *Federal Register* and incorporate revisions by the etary of the Department of Health, Education, and fare through July 1, 1976. In most states, HSA's consist of an aggregation of counties. In some instan however, (Alaska; Connecticut; Massachusetts; the of Chicago; and the Navajo, Hopi, White Moun San Carlos, and Papago Indian Reservations) the h service areas were not composites of counties, but ra politico-legal boundaries. The exact political units for each HSA are listed in Exhibit A

County

Selected characteristics of physicians by county f specific state are listed in Tables 19-21. If no physi are located in a county, that county is not listed in t tables. For some states, noncounty geographic area treated as counties where the geographic subdivis used differ. This usage parallels the usage in the co group tables. The independent cities of St. L Missouri; Baltimore, Maryland; Alexandria, Virg Hampton, Virginia; and Chesapeake, Virginia treated as individual counties. All other indepen cities, largely those in Virginia, are incorporated the county which encompasses it. Princes Anne Co in Virginia is referred to as Virginia Beach city, Kalawao County in Hawaii is combined with M County. The four judicial divisions of Alaska treated as counties.

sician Characteristics

e distributions of physicians are described in this
ne in terms of a number of professional character-
, with some individual characteristics cross-
ated with others. Key characteristics include
alty, major professional activity, age, sex, board
fication, Federal or Non-Federal employment, and
and county of graduation. The thirty-six specialty
ifications used in this publication are the same as
used in other AMA publications such as the *Physi-
Distribution and Medical Licensure in the U.S.,*
and are presented in Table B. A physician's
alty classification is defined as that in which he/she
ts spending the largest number of practice hours.
umber of county tables utilize the classification
m of primary care/non-primary care specialists.
ary care physicians, for the purposes of these
s, are physicians whose specialty is general prac-
family practice, internal medicine, pediatrics, and
trics/gynecology. Another area of general interest
ecialty board certification. Certification indicates
the physician has satisfactorily completed an ex-
ation in an area of specialization and has taken all
of the specific training requirements for certificati
a specialty board.[2] The licensed physician is fr
practice any specialty regardless of whether the
cian is board certified or not. Tables in this public
indicate board certification in some specialty bu
necessarily the specialty in which the physici
classified. However, over 90 percent of the phys
reported as board certified are certified in the spe
in which he/she is classified.[3]

Physicians' professional activity by specialty is
to assess the availability of patient care. Therefore
fessional activity is reported by patient care
subgroups of patient care on the basis of "office

[2] "The boards are in no sense educational institutions, and t
tificate of a board is not to be considered a degree. It does not
on any person legal qualifications, privileges, nor a license t
tice medicine or a specialty. The boards do not in any way ir
with or limit the professional activities of a licensed physici
do they desire to interfere in the regular or legitimate duties
practitioner of medicine." Liaison Committee on Graduate M
Education, *Directory of Accredited Residencies, 1977–78.* (C
American Medical Association, 1978), p. 367.

[3] *AMA Physician Masterfile, 1976.* Special Tabulations. Divi
Survey and Data Resources, American Medical Association

ctice" and "hospital based practice," either as a dent or full-time hospital staff. Non-patient care ac-ies, such as administration, medical teaching, and lical research are also reported separately. Two of activity categories—inactive and not classified— need further clarification. Inactive physicians are se who have reported to the AMA via the Physician's fessional Activity questionnaire that they are either red, semi-retired, permanently disabled, temporarily in practice, or not active for other reasons. Physi-s who are categorized as not classified are those for om the AMA has not received any information as to r type of practice and present employment.

efinitions of the two other classifications used in cribing physician characteristics are: Age as defined erms of intervals of under 35, 35 to 44, 45 to 54, 55 4, 65 to 75, and 75 and over; Federal employment as ned as employment by the Veterans Administration, tary Services, the U.S. Public Health Service, and er Federal Service.

he medical education background of physicians is ented in several forms. Physicians who graduated n United States medical schools are categorized by school of graduation and the state in which they cur-ly are practicing medicine. In addition, physicians ted in a particular county group or county within a e are cross-categorized either as having graduated n a medical school in the state, in a contiguous state, ome other state, in Canada, or outside the United es and Canada.

RELATIONSHIP TO OTHER AMERICAN MEDICAL ASSOCIATION PUBLICATIONS AND TO THE COOPERATIVE HEALTH STATISTICS SYSTEM (CHSS)

lthough previous AMA publications, *Physician tribution and Medical Licensure in the U.S.,* and *dical School Alumni,* have reported similar informa-, *Characteristics of Physicians* provides more detail-nformation than previously available in published n.

he publication has two key features: greater detail of sicians' characteristics and greater detail with ect to geographic units. More detail is provided for distributions, sex, and specialty board certifica-—for states, county groups, individual counties, for the health service areas. Thus, this publication mpts to meet a more extensive set of data needs not by other AMA publication series.

data collection effort to provide information lar to the data published in *Characteristics of Physi-s* is being undertaken by the Cooperative Health istics System (CHSS). Although this system even-y is to collect data on a state-by-state basis for thir-health related occupations, reports published as a lt of CHSS have not contained the level of detail available in the *Characteristics of Physicians.*[4] Fo stance, *Characteristics of Physicians* provides detailed analysis of the major professional activit physicians. In addition, it provides board certifica statistics for individual HSA's and counties, age specialty distributions by county, and specialty and distributions for Federal physicians. Further, bec the CHSS collection effort relies on 50 separate a cies, uniformity in quality and effort is not assu And indeed the CHSS is collecting physician data in ly a limited number of states at this time.

INTERPRETATION OF TABLES

Because of the complexity and detail of the presented in these volumes, care must be exercise their interpretation. A few explanatory words necessary about the treatment of the physi classifications used in these tabulations.

As mentioned previously, it was felt that data on pr sionally active physicians would be most useful research and planning purposes. At the same t however, it was felt that the total pool of physi manpower should be represented in these volumes. dual purpose caused some problem in the design of tain tables because of the inactive and not classifie tivity categories. These two categories are include the tabulations but are treated differently dependin the type of cross-tabulation involved. Generally tables in which specialty is cross-tabulated with m professional activity, the inactive and not class physicians are included in the total value but are distributed by specialty. Instead, these two values provided at the bottom of the specialty column u "Inactive," "Non-classified," and "Add Unknown". To arrive at the total value, the ina and not classified values should be added to the su the other major professional activity categories. applies to Tables 1, 3, 6, 9, 16, and 19.

Address Unknown

Physicians with unknown addresses are included in Table 1 for informational purposes. Again, this v is not distributed throughout the table but is includ the grand total. Physicians with unknown addresse excluded from all other national tables; therefore grand total value on Table 1 exceeds the total valu Table 2 plus the total in Table 3, and the total repo in Table 4.

Availablity of Data

This concludes the description of data containe the COP series. Every effort has been made to pro the most frequently requested information in a ma meaningful to most users. These data are also b made available in the form of print tapes from Bureau of Health Manpower. In addition, plans are underway to publish the COP series on a regular b

[4] These observations are based on a comparison of the *Health Annual* for Massachusetts and the *Characteristics of Physi Massachusetts.*

The section that follows provides a brief overview of the *AMA Physician Masterfile* on which this publication is based.

AMA PHYSICIAN MASTERFILE[5]

While data collection has been an AMA activity for many years, the objectives, collection techniques, and use of the data undergo constant review and have undergone considerable changes each year. A masterfile of physicians has been maintained by the Association since 1906. However, in the early days of its existence, the *Masterfile* was primarily a listing of physicians maintained as a record-keeping device for membership and mailing purposes. Decisions were made on a day-to-day basis without a unified approach and without regard as to what these decisions would mean in terms of statistical methods and interpretation of the data.

As research activities within the Association became more sophisticated, the complexity of data requirements increased. The *Masterfile* was, therefore, expanded and improved to meet these requirements. Today, the *AMA Physician Masterfile* is the most comprehensive and complete source of physician data in the United States. It includes information on every physician in the country, members and non-members of the Association, on graduates of American medical schools who are temporarily practicing overseas, and graduates of foreign medical schools who are in the United States and meet U.S. education standards for primary recognition as physicians. Thus, all physicians comprising the total physician manpower pool are included on the *AMA Physician Masterfile.*[6]

A file is started on each individual upon entry into medical school or, in the case of foreign and Canadian graduates, upon entry into the U.S. As a physician's training and career develops, additional information is added to the file—e.g., internship and residency training, licensure board certification, professional affiliations, and other characteristics. Although such characteristics change over time, they are not subject to *constant* change. These types of characteristics are included in the "historical" portion of the *Masterfile.* In addition, there is the "current professional activities" portion of each physician's record that identifies his current address, professional activity, specialties, and employment status. By definition, this current portion of the *Masterfile* is subject to constant change and must be updated through intense monitoring techniques.

Prior to 1966, physician classification by specialty, activity, and employment was made through the Classification of Professional Activities (CPA) system, which was based upon a "private practice/not in private practice" concept. Data were collected under this system via a short postcard-type questionnaire entitled *Verification of Physicians' Pro*
tivities. Several problems were inherent in
a major one being that the system reflecte
financial practice arrangement more so t
professional activity. The United States N
mittee on Vital and Health Statistics state

Center for Health Services Research and
began its efforts to update, improve, ar
AMA Physician Masterfile. In its evaluati
base, it identified four major limitation
classification system:

1. Existence of categories which were
   exclusive, resulting in confusion ar
   between and within activity, s
   employer categories.
2. Lack of a criterion upon which to b
   tion.
3. Lack of information on the most re
   each individual record.
4. Unavailability of information on
   for the annual verification question

These deficiencies were of sufficient conc
major revisions in both the structure of t
data collection procedures. Therefore, a
ject (the Reclassification of Physicians P
itiated to redesign the classification s
undertook the Reclassification Project i
with the National Center for Health St

[5] This section draws heavily from: Goodman, L.J. *Physician Distribution and Medical Licensure in the U.S., 1976.* Chicago: American Medical Association, 1977.

[6] For discussion of validation studies conducted on the *AMA Physician Masterfile,* see Goodman, L.J., and Eisenberg, B.S., "The Quality of Physician Data." *Public Data Use,* 5 (May 1977): pp. 37-43.

em. This facet of the Reclassification Project was lemented in 1968, with the adoption of a new ques-naire—*Record of Physicians' Professional Ac-ies.*

he new questionnaire was first used in 1968 in the sus survey of 317,000 physicians. Each physician asked to indicate the average number of hours ked per typical week in several areas within three gories—Professional Activities, Specialization, and sent Employment Status. The use of a "time spent" ce gave the physician a criterion upon which to sify his practice, and the confusion between and in the activity and employer categories was inated. After five mailings a usable response of 87.4 ent was attained.

ll returned questionnaires were passed through a es of clerical editing procedures and a quality control kpoint. They were then keypunched and the data cessed through a series of computer programs which gned the activity, specialty, and employment classi-tion to each physician record.

complete census was scheduled to be conducted y three years. However, in order to verify the infor-ion gathered in 1968 under the new system, a com-e census of 325,000 physicians was made again in 9. The questionnaire, structurally the same as that of 3, contained the physician's 1968 response with a mn provided for corrections or changes. A usable onse rate of 86.8 percent was attained. Analysis of two sets of data revealed that the data collected in 9 were consistent with that of 1968, therefore, con-ing that the questionnaire used to gather the data a reliable survey instrument. The most recent com-e census, for the purpose of this project, was con-ed in 1973. The 1973 questionnaire is identical to used in 1969 except for the addition of a section re-sting address and other general information. The ble response rate was consistent at 86.8 percent . A y of the questionnaire used in the 1973 census is ented in Exhibit B.

etween census years, a comprehensive computerized kly updating system keeps the *Masterfile* current. n physician's record is dated to reflect the most re-change, which may be obtained for AMA mailings publications, company mailings, physician corre-ndence, or hospitals, government agencies, medical ols, medical agencies, medical societies, specialty rds, and licensing agencies. Any indication of a ge in professional status or address triggers a ques-naire similar to the one used in the 1973 census. The sician is placed on a "change" file while follow-up ings are made to raise the response rate. In 1975, roximately 3,500 weekly change questionnaires were ed per week.

s an additional check on the *Masterfile* between cen-years, the AMA's Center for Health Services earch and Development conducts year-end computer ts. A comparison of 1972 and 1973 year-end data vs the same consistency as the complete census data 968 and 1969. A similar comparison was conducted e completion of the 1977 census. The reliability of *Masterfile* was evaluated when the Center prepared its annual and periodic series of statistical tabulat These include the publications *Distribution of P cians, Selected Characteristics of the Physician Po tion, Medical School Alumni, Foreign Me Graduates,* as well as reports on AMA member physician manpower, women physicians, and spec society statistics.

While the data collected for the Record of Physic Professional Activities questionnaire represent a n input to the *AMA Physician Masterfile,* data from sources are also incorporated. These other source clude:

- *Medical Schools*—Provides data on school year of graduation, birthplace, birthdate, professional appointments.
- *State Licensing Boards*—Provides licensure s of physicians.
- *Hospitals*—Provides information on interns residents, birthplace, and foreign me graduates in training.
- *Department of Defense*—Provides data ann on physicians in government service.
- *American Specialty Boards*—Provides dat board certification of physicians.
- *Medical Societies*—Provides data on membe in specialty, state, and county societies.
- *Educational Council for Foreign Me Graduates*—Provides data on foreign me graduates.

While many sources provide data for inclusion the *Masterfile,* data are also often extracted fron *Masterfile* for use by these agencies. In addition *Masterfile* is used by the National Center for H Statistics; the Office of Emergency Preparedness i Office of the President of the U.S.; the Office o Secretary of DHEW; the National Institutes of He various other federal, state, and local government cies; numerous universities and medical schools; county, and specialty medical societies; the maceutical industry; and ten addressing companie

EXHIBIT A:

HEALTH SERVICE AREA DESIGNATIO JULY 1, 1976

The National Health Planning and Reso Development Act of 1974 (PL #93-641) mandated health service areas be established throughout United States. The legislation specified that each h service area meet the following requirements:[7]

1. The area must be a rational geographic re containing a comprehensive range of health vices, and of a character suitable for the effe planning and development of health services

[7]Committee on Interstate and Foreign Commerce, *National Policy, Health Planning and Resources Development Act of* Report No. 93-1382. (Washington: Government Printing O 1974).

2. To the extent practicable, the area must include at least one center for the provision of highly specialized health services.
3. Upon establishment, the area must have a population between 500,000 and three million, with the following exceptions: the population may exceed three million if the area includes a standard metropolitan statistical area (as determined by the Office of Management and Budget) with a population of more than three million persons; and the population of an area may be less than 500,000 in unusual circumstances, but not less than 200,000 except in highly unusual circumstances if the Governor of each state in which the area is located determines, with the approval of the Secretary, that the area meets the other requirements of this subsection. "Unusual" and "highly unusual" circumstances are to be defined by the Secretary in regulations.
4. To the maximum extent feasible, the boundaries of the health service area must be coordinated with the boundaries of Professional Standards Review Organizations, existing regional planning areas, and State planning and administrative areas.

   Each standard metropolitan statistical area (SMSA) must be entirely contained within the boundaries of one health service area unless the Governor of each State in which a SMSA is located determines, with the approval of the Secretary, that a health service area should contain only part of the SMSA in order to meet the other requirements of this subsection.

The 205 Health Service Areas designated in July 1976 * are the definitions used in this publication. A listing of the HSA's and the counties, towns, or cities comprising them for the state treated in this volume follows below.

UTAH

Area 1

All counties except parts of San Juan County, which is a portion of the Navajo Nation.

Area 2

Navajo Reservation (Arizona, New Mexico, Utah portions)

OFFICIAL RECORD—IMMEDIATE RESPONSE REQUESTED

RECORD OF PHYSICIANS' PROFESSIONAL ACTIVITIES

DIRECTORY OF PHYSICIANS

Center for Health Services Research and Development

AMERICAN MEDICAL ASSOCIATION

535 N. Dearborn Street

Chicago, Illinois 60610

Dear Doctor:

Please complete this questionnaire as soon as possible so that your official record is up-to-date with correct and current information for printing of the *1973 AMA DIRECTORY*. Data obtained from this questionnaire will be aggregated and used to describe the distribution of physicians and to analyze health manpower. However, *NO information from your record will be released* to any organization for the purpose of developing independent physician data files.

Thank you.

Instructions

1. Please answer every question on the basis of your *current* activities.
2. ***Indicate any changes.*** Information which you provided previously has been printed in this form. Please *complete* unanswered sections and make *discrete changes* where applicable.
3. Upon completion, return the questionnaire at your *earliest possible convenience*, using the preaddressed envelope.

Contents

The questionnaire is divided into four sections:

I. *Professional Activities*—the types of activities in which each physician spends the most time during an *average week*.

II. *Specialization*—the time physicians spend in their major fields of specialization.

III. *Present Employment Status*—the number of hours *per average week* spent under various practice arrangements, by type of practice organization or employer.

IV. *Address and General Information*

EXHIBIT B
PHYSICIANS
PROFESSIONA
ACTIVITIES
QUESTIONNAI

I. PROFESSIONAL ACTIVITIES

Please describe your PRESENT professional activities by indicating the *average number of hours spent during a typical week*. Please answer EVERY question 1-8. If you do *not* spend any hours on any particular activity below, so indicate by entering zero (0) hours in appropriate spacing.

HOURS PER WEEK

	Prior Census	Changes If Any
1. How many hours per week do you currently spend in a full-time TRAINING program as an intern or resident? Indicate whether you are a(n) 1 ☐ INTERN 2 ☐ RESIDENT. . . . . *(If you checked either of the boxes, please proceed to questions 6, 7, and 8 and answer, if applicable.)*	HRS.	1 2 3 HRS.
2. How many hours per week do you spend in PRACTICE INVOLVING DIRECT CARE OF PATIENTS? Direct care means seeing patients; however, it also includes patient services by such physicians as pathologists and radiologists. *Exclude time spent in training, teaching, or research. Include travel time and time spent on record keeping and other office work connected with your patients.*	HRS.	4 HRS.
3. How many hours per week do you spend on ADMINISTRATIVE ACTIVITIES, AS A SALARIED STAFF MEMBER OR EXECUTIVE OF AN ORGANIZATION? *Exclude time spent on record keeping and office work connected with management of your own practice. Include activities connected with the administration or staff committees of a hospital or other health facility or agency, clinic or group, or any other organization by which you may be salaried as an executive or staff member.*	HRS.	5 HRS.
4. How many hours per week do you spend on MEDICAL TEACHING? *Include hours spent in teaching as well as in preparation for subjects taught in medical schools, nursing schools, other hospital schools, hospitals, colleges, universities, or any other educational institutions.*	HRS.	6 HRS.
a. OF THESE HOURS how many do you spend on direct care of patients? *Exclude time devoted to patient care by house staff under your supervision.* . . . . . *In view of possible overlap of hours spent in teaching and research, please do not double-count such hours, but report them instead in the most applicable category.*	HRS.	7 HRS.
5. How many hours per week do you spend on MEDICAL RESEARCH? *All phases of investigating medical problems regardless of source of funds for such research.*	HRS.	8 HRS.
a. OF THESE HOURS how many do you spend on direct care of patients? *Exclude time devoted to patient care by house staff under your supervision.*	HRS.	9 HRS.
6. How many hours per week do you spend on any OTHER medical activities *(not listed above)* INVOLVING DIRECT CARE of patients?	HRS.	10 HRS.
7. How many hours per week do you spend on any OTHER medical activities *(not listed above)* NOT INVOLVING direct care of patients?	HRS.	11 HRS.
8. About how many hours per week do you spend in ALL PROFESSIONAL ACTIVITIES? Total of questions 1 through 7 (exclude 4a and 5a)	HRS.	12 HRS.

If you indicated "zero" on question 8, or if *none* of the above categories apply to you, please answer question 9.

9. Are you: 1 ☐ RETIRED 2 ☐ SEMI-RETIRED
3 ☐ PERMANENTLY DISABLED
4 ☐ TEMPORARILY not in practice
5 ☐ Not active for other reasons *(please describe)*_____

Total of Section I, equivalent to total of Section II, and total of Section III, respectively.

Please *cross out* any prior information which is *not* applicable.

IV. ADDRESS AND GENERAL INFORMATION

1. Is the machine printed address BELOW:

   a. *Both* your Professional and Home Address?..... ☐ 13
   (If so, proceed directly to Question 3.)

   b. Your *Professional* Address *only?*...
   (If so, please enter your *HOME* address in space following (c) below and proceed to Question 2.) ☐ 14

   c. Your *Home* Address *only?*.....
   (If so, please enter your *PROFESSIONAL* address in following space.) ☐ 15

(STREET) 14-45

(CITY, STATE, ZIP) 46-75

2. Please indicate at which address you wish to receive *medically related* material:

   Professional Address..... ☐ 13

   Home Address..... ☐ 14

3. Please indicate below the county and state of your HIGH SCHOOL graduation if in the United States or Possessions.

(County) 15-17 (State) 18-19 20-21

If already provided, please verify following:

(County) (State)

GROUP NAME

ADDRESS

CITY-STATE-ZIP

4. Please supply the following information:

Social Security No.: 22-32

Age: 33-35

Sex: ☐ 36 Male ☐ 37 Female

Race: ☐ 38 White ☐ 39 Black ☐ 40-41 Other

List of Designated Specialty Codes
